

ABSTRACT OF THE DISCLOSURE

A non-reciprocal circuit element has a yoke including a top yoke component and a bottom yoke component. The yoke
5 includes a magnetic plate, line conductors, capacitor chips disposed around the magnetic plate, and a magnet for applying a bias magnetic field. The line conductors intersect on the main surface of the magnetic plate. Each end of the line conductors is connected to the corresponding capacitor chip.
10 The magnet has a major axis and a minor axis, and further has a convex surface on at least one peripheral portion thereof.
